SageWater, America's leading repiping company, introduced SageWater RENEW in 2014 to provide a truly non-invasive plumbing solution to its clients. RENEW is based on an 80-year-old treatment process that creates a protective layer inside pipes using a safe food-grade additive.

Today, RENEW is a leading pipe restoration company focused on high-quality plumbing solutions for its customers around the country.

## BENEFITS

- » No disruption to residents or water service
- » Prevents pinhole leaks
- » Stops pipe corrosion
- » Short-term payback on investment
- » Extends the life of a piping system
- » Controls leaching of lead and toxic materials from pipes
- » Eliminates water discoloration
- » Delivers significant value compared to repiping or epoxy
- » Turnkey solutions designed to free up property management

### HISTORIC HIGH-RISE: Southern California

**BEFORE RENEW:** This downtown historic property experienced 7 leaks in the previous 15 months due to water quality corroding the copper domestic pipes. Management was interested in a long-term solution without the cost of a complete pipe replacement.

<b>UNITS:</b> 150+	<b>STORIES:</b> 11	<b>BUILT:</b> 1920's
-----------------------	-----------------------	-------------------------

**AFTER RENEW:** The Renew treatment began in 2017 in the building's copper piping system, and the property has experienced no pinhole leaks since treatment began.

### GARDEN-STYLE APARTMENTS: New Mexico

**BEFORE RENEW:** This community was suffering from approximately 6 pinhole leaks per year, and growing. The leaks were typically in domestic hot water pipes underneath concrete slabs, so repair required excavation - a very disruptive & extremely expensive process. The water in the region is particularly corrosive, and the owner wanted a solution to stop the slab leaks that was more economical and effective than pipe replacement without disrupting residents or water service.

<b>UNITS:</b> 240+	<b>STORIES:</b> 2 floors, 13 buildings	<b>BUILT:</b> 1980's
-----------------------	---	-------------------------

**AFTER RENEW:** We began treating the property in September 2015 at two boiler rooms and the client has not experienced any new slab leaks since.

## SAGEWATER RENEW CERTIFICATIONS

EPA (40 CFR, 141.82 and 40 CFR 141-143)

FDA (21 CFD-173.310)

NSF/ANSI (Standards 60/61)

American Water Works Association/ANSI  
(AWWA B404)

Army Corps of Engineers

Established in 2014, SageWater RENEW is a leading pipe restoration company, built upon 30 years of delivering plumbing solutions to apartments, condominiums, and office buildings nationwide.

A clamped pipe is a temporary solution to stopping pinhole leaks. Anti-corrosives, including sodium silicates, help provide lasting protection from pinhole leaks.
