

5 Key Questions

To Get a Pipe Replacement Project Started

1) Do you have enough information to move forward?

- Do you know what's leaking?
- What have you done to understand the scope of the problem?

Find out how to get information and data that helps you make decisions.

2) What's the best contracting model for your community?

- Every model has its merits and drawbacks.
- A model like design-build is gaining traction on the islands, and many still favor using a construction manager.

Dig deeper into understanding your options.

3) How do you choose the right contractor?

- Not all contractors are created equal, so it's important to ask key questions that help you select the right one for your community.
- Talk with references to learn whether a contractor delivers on time and cost.

Learn which key questions to ask.

4) How do you start the project?

- Now that you've signed a contract (or contracts), make sure the project gets off on the right foot.
- Start with a clear understanding of the process.

Learn more about getting off to a strong start.

5) How will you afford the project?

- Find out what the project will cost.
- Consider your funding options.

Learn who can help.
