SageWater, America's leading repiping company, introduces SageWater RENEW: the solution that creates a safe, protective film on the inside of your pipes without having to open up walls or interrupt water service for long periods of time. The solution prevents pinhole leaks from forming, arrests further corrosion in the pipes and allows property owners to defer pipe replacement. Our restoration process is designed by water technology and corrosion experts and meets the SageWater quality standard, trusted by our family of clients for over 25 years.

BENEFITS

- » Short term payback on investment
- » Uses a non-invasive process
- » Prevents pinhole leaks
- » Stops pipe corrosion
- » Extends the life of a piping system
- » Reduces the build-up of minerals and scale in pipes
- » Controls leaching of lead and other toxic materials from your piping system
- » Improves water discoloration
- » Delivers significant value compared to epoxy lining or repiping

CASE STUDY: COPPER PINHOLE LEAKS

Apartment Tower Silver Spring, MD

The staff was clamping over 30 pinhole leaks per month in the hot water supply lines, and replacing 6-10 risers each year. Installing the Renew system prevented more than 300 leaks in the first year of use based on the leak frequency prior to installation.

UNITS:
400+

STORIES:
22

BUILT:
1969

DURATION:
Ongoing

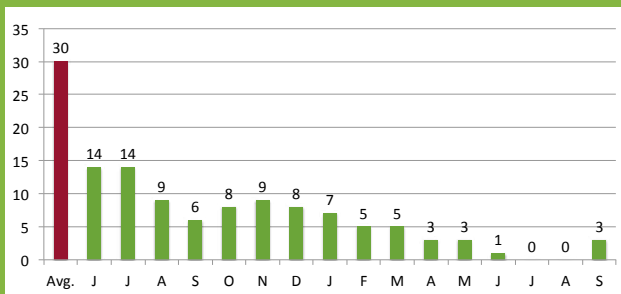

PROBLEM:

Water quality corroding domestic plumbing, resulting in pinhole leaks.

SOLUTION:

Application of the Renew solution on the domestic hot water plumbing system.

THE RESULTS: PINHOLE LEAKS PER MONTH

Leaks per month before Renew (average in red) and after Renew (green).
